

Toward Inclusive Society

— Cultivating Talents in a Rapidly Changing Society —

As human activity based in scientific and technological progress appears to be reaching its limits on a global scale, the question of how to achieve sustainable growth is becoming an increasingly urgent challenge. The rapid development of information technology has precipitated a transformation of existing social systems and institutions, with ongoing changes in how individuals prioritize values as well as in the way that our society distributes them. Building from a discussion of concerns regarding the limits of human activity at the global scale, we will investigate future prospects and problems from the standpoint of how to foster the human resources which will create the society of the future.
